MEDICAL | DURABILITY FOR SPECIAL APPLICATIONS INDOORS AND OUTDOORS

MEDICAL has been specially developed for areas where outstanding durability is required, combined with ease of care. In this case Wollsdorf Leather has placed great emphasis on the fact that extreme durability is not achieved at the expense of the unique characteristics of the natural leather product.

MEDICAL has the following properties due to its special tanning and state-of-the-art surface technologies:

- Antibacterial
- Disinfectant-resistant
- SPS (Surface Protection System) with improved anti-soiling behaviour
- Blood- and urine-resistant
- Very good abrasion-resistance and light-fastness
- Mould-resistance
- Salt water (sea-water resistance)

Despite the properties referred to above, MEDICAL is equivalent to standard upholstery leather in respect of tactile qualities and permeability to air.

MEDICAL has been developed for the following areas of use:

- Care homes and retirement homes
- Convalescent homes
- Hospitals
- Medical devices such as wheelchairs
- Doctors' surgeries
- Fitness and spa areas

Due to its properties MEDICAL is ideally suitable for outdoor use (e.g. garden furniture, ships and boats, etc.).

MEDICAL can of course be furnished and supplied with various embossed designs and printed effects.
